TOUGHENED GLASS.

[From the London Times.]

Although the manufacture of glass has been carried on for about two thousand years, it does not appear that any attempts to overcome its inherent brittleness and liability to fracture, and at the same time to preserve its transparency, have proved successful—if, indeed, they have ever been made, which is doubtful. It is true that the French philosopher, Reaumur, many years since hardened glass somewhat by exposing it to a high temperature for a considerable time. But this process, which is technically termed devitrification, while it hardens, at the same time crystallizes the glass and renders it opaque, the product being known as Reaumur's porcelain. Seven years since, however, M. Francis de la Bastie, a French engineer, after long and patient investigation into the subject, discovered a simple means of rendering glass practically unbreakable, and at the same time of preserving its transparency. There were many delicate conditions involved in the process by which he obtained this result, his success being achieved much in the same way as Pasteur's, but on endeavoring to repeat the successful experiment he failed slightly. For two years more M. de la Bastie, who possesses ample means, strove without avail to rediscover the secret of his success. At length, however, he succeeded in so doing, and has since been engaged in perfecting his invention, and developing a laboratory experiment into practical working. The process of conversion in the main is a very simple one, so simple that it seems singular it was never thought of before. Broadly stated, it consists in heating the glass to a certain temperature and plunging it while hot into a bath consisting of a heat-diluted compound. There are, however, many conditions in connection with the details of the process upon which a satisfactory result depends, and the neglect of any, even in a slight degree, constitutes the difference between success and failure. Thus the glass may be under-heated, and may not be susceptible to the effect of the bath, or it may be over-heated and then it will lose its shape; or, again, it may be rightly heated, and yet be spoiled in the course of transference to the bath. Moreover, the oleaginous constituents of the bath and their temperature have an important bearing upon the ultimate result. These and numerous other points of detail have all been satisfactorily settled by M. de la Bastie, who has designed furnaces and baths by means of which his toughening process can be carried out practically without fear of mischance. The time occupied in the actual process of tempering is merely nominal, for directly the articles are brought to the required temperature they are plunged into the bath and instantly withdrawn. The cost of tempering, too, is stated to be very small.

We have observed that M. de la Bastie went through a long course of experimental research before he attained success. He first worked, as an engineer naturally would, upon mechanical principles. Knowing that the fragility of glass results from the weakness of the cohesion of its molecules, he not unreasonably expected that, by forcing these molecules more closely together, and thus rendering the mass more compact, the strength and solidity of the material would be increased. But this doctrine, which holds good with iron and steel, as Sir Joseph Whitworth has practically demonstrated, does not apply to glass—compression failing to toughen it, even if applied to it when in a fluid or soft condition. By applying heat, however, which is only force in another form, the desired end is attained, and the physical properties of the material become altered in a very remarkable manner. In these articles, which consisted of watch-glasses, plates, dishes and sheet glass, both colored and plain, neither transparency nor color is affected at all, and the ring or sound only slightly. These articles—some of them being exceedingly thin—were thrown indiscriminately across a room against a wall, and fell spinning on the deal floor. Water was boiled in a saucepan over a fire and the water was quickly removed to a comparatively cold place, and was unaffected by the sudden change of temperature. One corner of a piece of glass was held by the hand in a gas-flame until the corner became exceedingly hot, but the heat was not communicated to the other portion of the glass, neither was it cracked from unequal expansion. A comparative experiment was then made with a piece of ordinary plate glass and a similar piece of toughened glass, in order to show their respective powers of resistance to fracture from the force of impact by a falling weight. In each case the glass was about six inches square, and was placed in a frame, the weight being dropped upon its centre. With the ordinary glass, a two-ounce brass weight falling on it from a height of 12 and 18 inches respectively did no damage, but at 24 inches the glass was broken into several fragments. With a thinner piece of toughened glass no impression was made by the same weight from heights ranging from 2 to 10 feet, the weight simply rebounding from off the glass. An eight-ounce iron weight, tried at 2 and 4 feet respectively, gave similar results. Upon the height being increased to six feet, however, the glass broke. But here another singular result was produced; instead of breaking into about a dozen pieces, as did the ordinary glass, it was literally smashed to atoms. The largest fragments measured about half an inch in length and breadth, and these were easily reduced by the fingers to atoms varying in size from that of a pin's point to that of a large pin's head. The lines of fracture in the fragments presented to the eye the appearance of irregular lace work, and these lines were, moreover, apparent to the touch, but more palpably on one side of the glass than the other. Which of the two sides was the one that received the first impact of the blow we are not able to determine. Another peculiarity is that the edges of the fracture are by no means so sharp, and therefore capable of causing incised wounds, as are those of ordinary glass. It would seem that the toughened glass possesses enormous cohesive power, but that if the equilibrium of the mass is disturbed at any one point the disturbance or disintegration instantly extends throughout the whole piece, the atoms no longer possessing the power of cohesion. Of the practical nature of M. de la Bastie's unique discovery there can be no question whatever, nor can there be any doubt of its value in the arts, sciences and manufactures.

TAKE SIMMONS' Liver Regulator,

FOR ALL DISEASES OF THE LIVER, STOMACH AND SPLEEN.

It is eminently a Family Medicine; and by being kept ready for immediate resort will save many an hour of suffering and many a dollar in time and doctors' bills.

After over Forty Years' trial it is still receiving the most unqualified testimonials of its virtues from persons of the highest character and responsibility. Eminent physicians commend it as the most

EFFECTUAL SPECIFIC
For Constipation, Headache, Pain in the Shoulders, Dizziness, Sour Stomach, bad taste in the mouth, bilious attacks, Palpitation of the Heart, Pain in the region of the Kidneys, dyspepsia, gloom and forebodings of evil, all of which are the offspring of a diseased Liver.

If you feel Dull, Drowsy, Debilitated, have frequent Headache, Mouth Tastes badly, poor Appetite, and Tongue Coated, you are suffering from Torpid Liver or "Biliousness," and nothing will cure you so speedily and permanently.

The Liver, the largest organ in the body, is generally the seat of the disease, and if not regulated in time, great suffering, wretchedness and DEATH will ensue.

Armed with this ANTIDOTE, all climates and changes of water and food may be faced without fear. As a Remedy in MALARIOUS FEVERS, BOWEL COMPLAINTS, RESTLESSNESS, JAUNDICE, NAUSEA, the Cholera, Purest and Best Family Medicine in the World!

"I have never seen or tried such a simple, efficacious, satisfactory and pleasant remedy in my life."—H. Hainor, St. Louis, Mo.

"I occasionally use, when my condition requires it, Dr. Simmons' Liver Regulator, with good effect."—Hon. Alex. H. Stephens.

Governor of Alabama.
"Your Regulator has been in use in my family for some time, and I am proud to add it is a valuable addition to the medicinal cabinet."—Gov. J. Gill Shorter, Ala.

"I have used the Regulator in my family for the past seventeen years. I can safely recommend it to the world as the best medicine I have ever used for that class of diseases it purports to cure."—H. E. Thigpen.

President of City Bank.
"Simmons' Liver Regulator has proved a good and efficacious medicine."—C. A. Nutting.

Druggist.
"We have been acquainted with Dr. Simmons' Liver Medicine for more than twenty years, and know it to be the best Liver Regulator offered to the public."—M. B. Lyon and H. L. Lyon, Bellefontaine, Ga.

SIMMONS' LIVER REGULATOR

FOR DYSPEPSIA, CONSTIPATION, Jaundice, Bilious attacks, SICK HEADACHE, Colic, Depression of Spirits, SOUR STOMACH, Heart Burn, &c., &c.

IT HAS NO EQUAL.
It is a faultless family medicine. Does not disarrange the system. Is sure to cure if taken regularly. Is no drastic violent medicine. Does not interfere with business. Is no intoxicating beverage. Contains the simplest and best remedies.

CAUTION!
Buy no powders or PREPARED SIMMONS' LIVER REGULATOR unless in our engraved wrapper, with Trade mark, Stamp and Signature unbroken. None other is genuine.

J. H. ZEILIN & CO.,
Macon, Ga., and Philadelphia.

The symptoms of Liver Complaint are uneasiness and pain in the side. Sometimes the pain is in the shoulder, and is mistaken for rheumatism. The stomach is affected with loss of appetite and sickness, bowels in general constive, sometimes alternating with lax. The head is troubled with pain, and dull, heavy sensation, considerable loss of memory, accompanied with painfulness which ought to have been done. Often complaining of weakness, debility, and low spirits. Sometimes many of the above symptoms attend the disease, and at other times very few of them, but the liver is generally the organ most involved.

Nearly all diseases originate from Indigestion and Torpidity of the Liver, and relief is always anxiously sought after. If the Liver is regulated in its action, health is almost invariably secured. Want of action in the Liver causes Headache, Constipation, Jaundice, Pain in the Shoulders, Cough, Chills, Dizziness, Sour Stomach, bad taste in the mouth, bilious attacks, palpitation of the heart, depression of spirits, or the blues, and a hundred other symptoms, for which SIMMONS' LIVER REGULATOR is the best remedy that has ever been discovered. It acts mildly, effectually, and being a simple vegetable substance, can do no injury to any quantities that it may be taken. It is harmless in every way; it has been used for 40 years, and hundreds of the good and great from all parts of the country will vouch for its being the purest and best.

The Clergy.
"My wife and self have used the Regulator for years, and testify to its great virtues."—Rev. J. R. Felder, Perry, Ga.

Ladies' Endorsement.
"I have given your medicines thorough trial, and in no case has it failed to give full satisfaction."—Ellen Meacham, Chatahoocoo, Fla.

FERTILIZERS.

TO FARMERS AND GARDENERS.

EXCELLENZA SOLUBLE PHOSPHATE.

I am now in receipt of a supply of this fine Phosphate, which I can recommend with confidence to agriculturists, having sold it for several years without a single complaint of its action.

PRICE \$50 PER 2000 LBS.

THOS. PERRY,
NO. 17 KING STREET.

CLARKE'S AMMONIATED

Dissolved Bone.

I have taken the agency of this valuable Super Phosphate, which has been used for several seasons in the adjoining counties of Fairfax and Loudoun, giving entire satisfaction in every case, and comparing favorably with the best articles in the market.

See the following analysis, by Doct. R. H. Stabler, of Alexandria, who states that it is a perfectly pure article.

ANALYSIS.
Water..... 25.25
Organic matter, containing a trace of Ammonia..... 40.75
Ash or inorganic matter..... 31.00

ANALYSIS OF ASH.
Bone Phosphate of Lime..... 27.82
Sulphuric Acid..... 5.71
Sand..... 0.41

(Signed) R. H. STABLER, Chemist.
March 22, 1875.

No Super Phosphate can be made without aid of water, and those which do not show this feature have dried out in most cases by the admixture of heavy inert matter of no use to the farmer. PRICE \$45 PER TON OF 2000 LBS.

STATE TAXES.

The final period allowed by law for the payment of STATE TAXES for 1874, having passed, and I being required to make my final settlement with the Treasurer, I hope that all will come forward AT ONCE and settle their bills, and thereby save the very disagreeable necessity of enforcing the law in regard to delinquent tax bills. Tax payers will be called upon as far as possible by either myself or Deputy. For the convenience of those who wish to call at once, I will be at my office, Room No. 4, Market House, (entrance on Fairfax street), from 9 to 10 a. m. and 4 to 6 p. m. every day.

JOHN W. CAMPBELL,
ap 7-1m City Sergeant.
